Patient presents with headache after a concussion

Review diagnostic criteria and determine headache type

Concussion or headache red flags present? C, D

Yes

Perform focused headache history and assessment A, B

No

Concussion or headache red flags present? C, D

Yes

Emergency or specialty referral as indicated? E,G

No

Perform focused headache history and assessment A, B

Patient presents with headache after a concussion

Management of Headache Following Concussion/mTBI: Guidance for the Primary Care Manager in Deployed and Non-Deployed Settings
### A. Focused Headache History

<table>
<thead>
<tr>
<th>Areas of Assessment</th>
<th>Examples of Questions and Information to Collect</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Symptoms</strong></td>
<td>• Persistent pain in head or neck after a concussion (Use of 0-10 scale is recommended, 1=barely present, 5=pain beginning to interfere with activity, and 10=worst imaginable pain)</td>
</tr>
<tr>
<td><strong>Location</strong></td>
<td>• Right or left side • Bilateral vs. unilateral • Behind the eyes • Face • Stays in one place or moves around (radiates)</td>
</tr>
<tr>
<td><strong>Description of Pain</strong></td>
<td>• Throbbing/pulsating • Stabbing, sharp or dull/nagging • Head, face or neck tenderness • Pressing/squeezing • Pain with chewing or opening mouth • Decreased jaw movement</td>
</tr>
<tr>
<td><strong>Frequency and Duration</strong></td>
<td>• Episodic or continuous • Seconds, minutes, hours, days or constant</td>
</tr>
<tr>
<td><strong>Associated Physical Symptoms</strong></td>
<td>• Vision changes (blindness, blurry vision, double vision, eyelid droop, tearing, eye redness, eye puffiness) • Light, noise and odor sensitivity, nose blockage/discharge • Nausea, loss of appetite, hunger, bowel changes • Premonitory symptoms (fatigue, difficulty concentrating) • Neck stiffness or pain • Yawning • Pallor • Auras (visual, sensory or dysphasic speech disturbances) • Numbness or tingling around lips, arms or legs</td>
</tr>
<tr>
<td><strong>Headache History</strong></td>
<td>• Previous headache diagnosis • Worsening headache • History of temporal mandibular joint pain (TMJ) • Family history • Previous head trauma or TBI</td>
</tr>
<tr>
<td><strong>Headache Triggers</strong></td>
<td>• Sleep (too much or too little) • Physical activity • Straining or coughing • Missed meal • Food • Pregnancy • Caffeine • Muscle tension • Emotional stress (during or after) • Bending over • Sexual activity • Change in weather • Alcohol • Menstrual cycle • Contraceptives</td>
</tr>
<tr>
<td><strong>Social History</strong></td>
<td>• Headache interferes with family, work or school • Substance use or abuse (caffeine, alcohol, tobacco), supplement use (vitamins, etc.)</td>
</tr>
<tr>
<td><strong>Medication History</strong></td>
<td>• Previous medications used for headache prevention and rescue • Dosage, frequency and duration; failed medications • Current medications, how often taking rescue medication or preventive medication</td>
</tr>
<tr>
<td><strong>Co-morbid Conditions</strong></td>
<td>• Insomnia, depression, anxiety, obstructive sleep apnea</td>
</tr>
<tr>
<td><strong>Questionnaires</strong></td>
<td>• Patient Health Questionnaire (PHQ), Neurobehavioral Symptom Inventory (NSI), Patient Global Impression of Change (PGiC), Headache Impact Test-6 (HIT)</td>
</tr>
</tbody>
</table>

### B. Focused Headache Examination

<table>
<thead>
<tr>
<th>Area of Assessment</th>
<th>Examples</th>
</tr>
</thead>
</table>
| **Head, Neck and Face**             | • Cranial nerve examination  
• Neck range of motion  
• Palpation of head and neck for trigger points or tenderness  
• Evaluate for papilledema |
| **Ears, Nose and Throat**           | • Examine the ears, nares  
• Palpate the face and percuss sinuses  
• TMJ examination |
| **Other Neurological Examination**  | • Reflexes  
• Sensory testing  
• Romberg testing  
• Pronator drift  
• Strength testing |
| **Mental Status**                   | • Speech fluency  
• Word recall |
# C. Concussion Red Flags

<table>
<thead>
<tr>
<th>Red Flag Description</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Progressively declining level of consciousness (LOC)</td>
<td>8. Repeated vomiting</td>
</tr>
<tr>
<td>2. LOC &gt; 5 minutes</td>
<td>9. Worsening headache</td>
</tr>
<tr>
<td>3. Declining neurological status</td>
<td>10. Pupil asymmetry</td>
</tr>
<tr>
<td>4. Glasgow Coma Scale (GCS) Score &lt; 15</td>
<td>11. Double vision</td>
</tr>
<tr>
<td>5. Seizures</td>
<td>12. Slurred speech</td>
</tr>
<tr>
<td>7. Cannot recognize people or disoriented to place</td>
<td></td>
</tr>

# D. Headache Red Flags and Indications for Referral

<table>
<thead>
<tr>
<th>Indications for Emergency Referral</th>
<th>Indications for Specialty Referral</th>
</tr>
</thead>
<tbody>
<tr>
<td>Concussion red flags</td>
<td>Presence of systemic symptoms</td>
</tr>
<tr>
<td>Thunderclap headache (sudden onset)</td>
<td>Associated neurological symptoms</td>
</tr>
<tr>
<td>Sudden neurological deficit</td>
<td>Onset after age 50*</td>
</tr>
<tr>
<td>Persistent bleeding from nose, ears or scalp</td>
<td>Change in pattern of headache</td>
</tr>
<tr>
<td>Cranial fracture</td>
<td>Valsalva precipitation</td>
</tr>
<tr>
<td>Infection resulting from a penetrating injury</td>
<td>Postural aggravation</td>
</tr>
<tr>
<td>Cerebrospinal fluid leakage (nose or ear)</td>
<td>TMJ disorder</td>
</tr>
<tr>
<td>Intracranial hemorrhage on CT</td>
<td>ENT disorder</td>
</tr>
<tr>
<td>Papilledema</td>
<td>Anticoagulant therapy*</td>
</tr>
</tbody>
</table>

* Patients on anticoagulant therapy or over age 50 have an increased risk of chronic subdural hematoma. This demographic may need imaging with or without specialty referral based on the head trauma history and provider judgment. Refer to the DVBIC CR, Neuroimaging following Mild Traumatic Brain Injury: Guidance in the Non-Deployed Setting; available at dvbic.dcoe.mil.
### E. Characteristics of Headache Types

</tbody>
</table>

* PCM should consider the possibility of medication overuse headache (MOH) when criteria in Table E is present. Optimal treatment consists of discontinuation of the offending medications, acute treatment of withdrawal symptoms and pain, and use of analgesic medication as preventative treatment only when necessary.
**F. Migraine Headache**

<table>
<thead>
<tr>
<th>Migraine without aura:</th>
<th>ICD-10-CM: G43.009</th>
</tr>
</thead>
<tbody>
<tr>
<td>Migraine with aura:</td>
<td>ICD-10-CM: G43.109</td>
</tr>
</tbody>
</table>

**Description:**

A. Headache attacks lasting 4-72 hours (untreated or unsuccessfully treated)

B. Headache has at least two of the following characteristics:
   1. Unilateral location
   2. Pulsating quality
   3. Moderate or severe pain intensity
   4. Aggravation by, or causing avoidance of, routine physical activity (e.g., walking or climbing stairs)

C. During headache at least one of the following:
   1. Nausea and/or vomiting
   2. Photophobia or phonophobia

D. May or may not be accompanied by an aura (present in 15-33 percent of patients). Most common auras are visual, sensory, motor or speech and language.

---

**Non-pharmacologic Treatment**

Education on lifestyle changes (Headache Management Fact Sheet available at dvbic.dcoe.mil)

- Environmental stimulus control & sleep hygiene
- Exercise
- Hydration
- Progressive return to activity
- Identification and avoidance of triggers
- Caffeine intake
- Nutrition
- Regular shift work
- Relaxation training
- Cognitive behavior therapy (CBT)
- Biofeedback

---

**Pharmacologic Treatment**

**Acute/Abortive Agents:**

**Mild/moderate**: Acetaminophen; NSAIDs† (ibuprofen, naproxen, >48 hours following concussion

**Severe**: Triptans (e.g., sumatriptan, rizatriptan, zolmitriptan); dihydroergotamine (DHE) nasal spray†† (pre-treat with antiemetic); ketorolac nasal spray†† or intramuscular

**Preventive Treatment:**

**First Line**: Tricyclic antidepressants (TCA) (e.g., amitriptyline, nortriptyline); antiepileptics (e.g., topiramate, valproate††); beta blockers (e.g., metoprolol)

**Second Line**: Serotonin norepinephrine reuptake inhibitors (SNRI) (e.g., venlafaxine); onabotulinum toxin A†† (Botox); (referral recommended)

---

† U.S. Food and Drug Administration Agency (FDA) warning cautions that NSAIDs can increase the risk of heart attack, heart failure, or stroke in patients with or without heart disease, or risk factors for heart disease, even during the first few weeks of treatment though the risk appears highest with longer use at higher doses. Detailed information is located at [http://www.fda.gov/Drugs/DrugSafety/ucm451800.htm](http://www.fda.gov/Drugs/DrugSafety/ucm451800.htm).

†† These medications are not currently available in the deployed formulary.
G. Tension-type Headache
ICD-10-CM: G44.209

Description:*  
A. Episodes of headache, typically bilateral, pressing or tightening in quality, of mild to moderate intensity, lasting minutes to days  
B. Pain does not worsen with routine physical activity and is not associated with nausea, but photophobia or phonophobia may be present  
C. Occurring for 1-15 days/month

Non-pharmacologic Treatment$^{41,42,43,44}$
Education on lifestyle changes (Headache Management Fact Sheet available at dvbic.dcoe.mil)
- Environmental stimulus control and sleep hygiene
- Exercise
- Hydration
- Progressive return to activity
- Caffeine intake
- Physical therapy
- Stress management
- Acupuncture
- Relaxation training
- CBT
- Biofeedback
- Massage

Pharmacologic Treatment

Acute/Abortive Agents:
First Line: Acetaminophen, NSAIDs†
Second Line: Acetaminophen/caffeine compounds

Preventive Treatment: Selective serotonin reuptake inhibitors (SSRI) (e.g., paroxetine, citalopram); SNRIs (e.g., venlafaxine); TCAs (e.g., amitriptyline, nortriptyline); tetracyclic antidepressants (e.g., mirtazapine)

† U.S. Food and Drug Administration Agency (FDA) warning cautions that NSAIDs can increase the risk of heart attack, heart failure, or stroke in patients with or without heart disease, or risk factors for heart disease, even during the first few weeks of treatment though the risk appears highest with longer use at higher doses. Detailed information is located at http://www.fda.gov/Drugs/DrugSafety/ucm451800.htm.
**H. Cervicogenic Headache**

ICD-10-CM: G44.841

**Description:**

A. Headache caused by a condition of the cervical spine or soft tissue of the neck, usually, but not always, associated with neck pain

B. Headache has developed in temporal relation to the head trauma

C. Cervical range of motion is reduced

D. Headache is made significantly worse by neck movement

**Non-pharmacologic Treatment**

- Acupuncture
- Physical therapy
- Greater occipital neurolysis/neurectomy (referral recommended)

**Pharmacologic Treatment**

**Acute/Abortive Agents:**

**First Line:** NSAIDs†

**Second Line:** Muscle relaxants if cervical spasms; trigger point injection (referral recommended)

**Preventive Treatment:** Antiepileptics (e.g., gabapentin, topiramate); TCAs (e.g., amitriptyline, noritriptyline); SNRIs (e.g., venlafaxine)

---

† U.S. Food and Drug Administration Agency (FDA) warning cautions that NSAIDs can increase the risk of heart attack, heart failure, or stroke in patients with or without heart disease, or risk factors for heart disease, even during the first few weeks of treatment though the risk appears highest with longer use at higher doses.

I. Headache Related to Neuropathic Pain

**ICD-10-CM: M792**

<table>
<thead>
<tr>
<th>Description:*</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Pain associated with soft-tissue injury of the scalp or face</td>
</tr>
<tr>
<td>B. May have superimposed lancinating component and may also be burning, deep, and aching</td>
</tr>
<tr>
<td>C. There may be local tingling and numbness, hyperesthesia, hyperalgesia, allodynia (pain due to a non-noxious stimulus) or hyperpathia (particularly unpleasant, exaggerated pain response)</td>
</tr>
<tr>
<td>D. Symptoms are long-lasting, typically persisting after resolution of the primary cause</td>
</tr>
</tbody>
</table>

**Non-pharmacologic Treatment**

- Relaxation therapy
- Physical therapy
- Acupuncture
- CBT
- Massage therapy

**Pharmacologic Treatment**

**Acute/Abortive Agents:**

* **First Line:** Acetaminophen or NSAIDs†
* **Second Line:** Antiepileptics (e.g., gabapentin); TCAs (e.g., amitriptyline, nortriptyline)

**Preventive Treatment:** Antiepileptics (e.g., gabapentin); TCAs (e.g., amitriptyline, nortriptyline)

---

† U.S. Food and Drug Administration Agency (FDA) warning cautions that NSAIDs can increase the risk of heart attack, heart failure, or stroke in patients with or without heart disease, or risk factors for heart disease, even during the first few weeks of treatment though the risk appears highest with longer use at higher doses.
